

THE SIDETRACKER ADVANTAGE

HIGH-SPECIFICATION SIDETRACKER LIFT TRUCKS ARE BUILT FOR LIFE

Sidetracker can manufacture narrow aisle trucks with:

Capacities up to 10 Tonnes

Aisles widths down to 1500 mm

Lift Heights up to 15 metres

Strong. Rugged, reliable – these features are as integral, to a Sidetracker as its exceptional manoeuvrability and space-saving ability.

The fact that Sidetrackers provide reliable operation year after year in demanding working conditions, indoors and out, for customers such as steel stockholders, demonstrates their quality.

Many Sidetrackers are used for more than 20 years with no attention other than routine servicing. Unusually for forklift trucks, most Sidetracker customers buy their trucks outright, because they have such confidence in their long-term reliability.

Quality is built into Sidetrackers from the base upwards. For example, high-grade 50mm steel is used for the main chassis sections. Repairing a fatigue fracture on a Sidetracker chassis is simply unknown.

The electro-hydraulic twin power system is also extremely strong and reliable. A Sidetracker can be driven on one motor if the other ever fails. Without a loss in capacity.

When reliability is so important, well-proven technology is the best option. Customers particularly welcome the absence of electronic components, which on other lift trucks have proved so unreliable and expensive.
